To Whom It May Concern

For the past 5 years Alpha Pumps Australia PTY. LTD. have been refurbishing our rotors and stators for our Moyno Pumps. Alpha Pumps continually supply a good quality product. They met all the requirements set by us in relation to the tolerances of the rotors and the type of material for refurbishing of the stators.

Alpha Pumps have been a great help in getting some of our rotors back in service with repairs to the drive end which had broken during normal operation. They have also been instrumental in helping getting our rotors and stators refurbished when there were no company able to do them.

Alpha Pumps reline our stators with polyurethane and re-chrome our rotors up to 12 times more Hard Chrome Plating compared with a new rotor. Which = 12 times more wear resistance, so that they are a matched set which has proved to be an advantage as we seem to be getting a longer wear life out of them.

If you require any further information please don't hesitate to contact me.
